

ABSTRACT

A silicone adhesive comprising (A) an
5 organopolysiloxane partial condensate of (i) a
diorganopolysiloxane end-capped with a hydroxyl radical and
(ii) an organopolysiloxane copolymer having hydroxyl radicals
and consisting essentially of $R^3SiO_{1/2}$ units and $SiO_{4/2}$ units
wherein R^3 is hydroxyl or a monovalent hydrocarbon radical,
10 (B) a silane or siloxane compound having a silicon
atom-bonded alkoxy radical and/or an epoxy radical, and (C) a
crosslinking agent exhibits pressure-sensitive adhesion and
permanent adhesion.
